

LEARN2

Learn2 is our new course management tool allowing for accurate administration, course co-ordination and customer interaction. The advantages of the Learn2 solution include continuous assessment, integrated Direct Debit memberships, online enrolment, and a mobile poolside handset for teachers to instantly check attendance and monitor performance with up-to-the-minute reporting.

HOME PORTAL

Reduce the pressure on your receptionists by allowing your customers to re-enrol for their next course themselves using Home Portal. Parents can keep better informed by viewing weekly teacher feedback and pay for their next set of lessons online. HomePortal even lets a parent manage more than one child and more than one course using a single login.

EASY REPORTING

Learn2 provides key management information specifically tailored for the course administrator. Check on your joiners, leavers, course movements and occupancy levels and set them against monthly targets. Instantly view them as a graph or tabulated data. Refine your reports by date, centre, specific course or teacher. Export to PDF or Excel and even set up automated daily, weekly or monthly reports to be sent by email.

AUTOMATED CUSTOMER CONTACT

No more enrolment letters! Once your pupil has been approved to move up to the next class, or needs to pay for the next set of lessons, Learn2 will automatically email and / or SMS the parent, informing them of the change. If the parent does not respond, reception will be alerted to prompt that phone call.

TEACHER PORTABLE DEVICE

No more paper based registers and competency check sheets. The teacher works using a durable, waterproof touch screen device. Connecting and syncing over a secure wireless network, all pupil information is downloaded allowing the teacher to take registers, assess individual pupils or assess via a specific competency. Any pupil with debts, notes or medical conditions is instantly flagged to the teacher.
