

ABOUT energy

With expenditure on utility bills increasing rapidly year on year, **energy** provides a unique opportunity to save money and directly influence your bottom line.

This is the only solution in the market which integrates your software booking sheets to the building's facilities. The solution will help reduce power wastage, save money and support your 'Green Agenda'.

WHY energy

By monitoring your booking sheets, **energy** switches on the power to the required facility before an activity is due to begin and switches it off once the activity has finished.

All aspects of the facility that use electricity can be linked to **energy** including; sports arenas and courts (Indoor and outdoor), saunas, steam rooms and heated areas. This list is only limited by the extent of the equipment requiring electricity in order to operate.

The solution works by integrating the booking sheet directly to the facilities switch board or to an existing Property Management Solution (PMS).

energy

YOUR **energy**

Save energy, save money, save the environment!

With the current trend in utility charges, a facility with an annual electricity bill of around £50,000, might expect to experience an annual increase of £10,000, of which half is consumed to supply the activity areas. The same facility is likely to have a utilisation of around 70%. During the unused periods, lights and heating may remain permanently on, wasting power and burning your money. whilst management practice may dictate that staff manually turn power off.

By interacting with the booking sheets and turning off the power source when it is not required, **energy** will reduce wastage and would save £9,000 every year in the above facility at least.

OTHER PRODUCTS

Other products within the plus2 suite include

- analyser - marketing & analysis
- kiosk - self-service booking & ticket collection
- pocket - mobile ePoS on a hand held device
- connect - customer online service
- card services - identity, access & loyalty

KEY FEATURES

- Interrogates booking sheets
- Control power supply
- Auto-power on & off

KEY BENEFITS

- Reduced energy bills
- Immediate ROI
- Decrease your 'carbon foot-print'
